

ROTARY TABLE

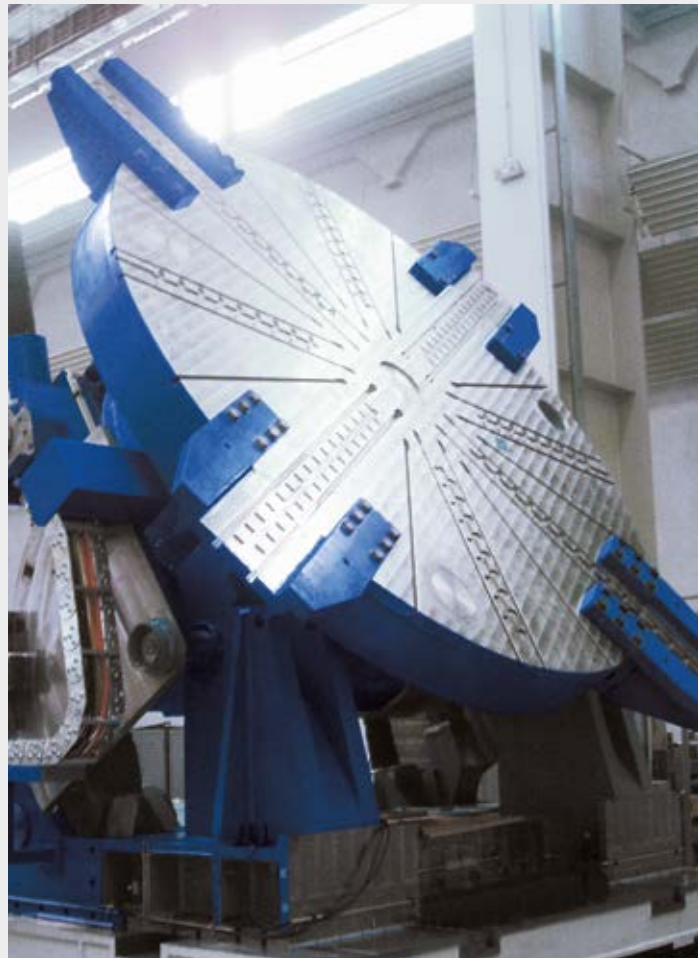

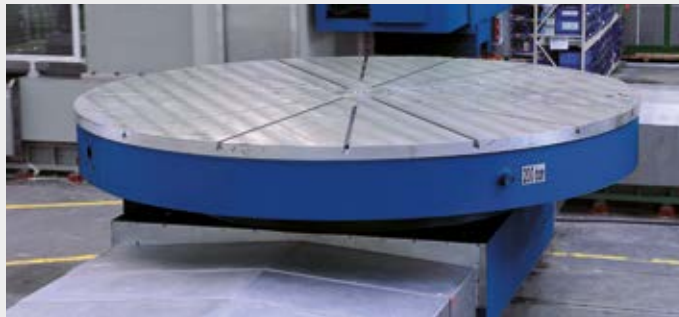

MILLING AND TURNING TABLES

Milling and/or turning rotary tables with or without cross movement.

The Aries milling-boring machines can be equipped with a wide range of roto-traversing tables with complete hydrostatic bearing both for the rotating B-axis and for the linear V-axis. In general all the tables can be equipped with a clamping system on the rotating B-axis. The system is designed in such a way that it does not modify the angular position of the table during the clamping phase.

Load capacity	ton	15 up to 500
Table surface dimensions	mm	2.000 x 2.000 - 6.500 x 8.000
